

## **Pest Control Program**

### **Directions:**

1. Interview a local insect and rodent management specialist and have him/her explain the most common pest problems in the area and what type of programs are used to exterminate the problem.
2. Interview a garden and lawn management specialist and have him/her explain the most common weed and insect pests found in the area.
3. Research methods used to control insects and rodents within a house and develop programs to eliminate infestation.
4. Learn ways to control and eliminate the problem. Develop a program to exterminate garden and lawn pests and when an outbreak occurs.
5. Compile your notes from the interviews and research findings into a two-page report.
