

Water Hose Repair

Directions:

1. Collect three water hoses (garden hoses, dishwasher hoses, washing machine hoses, etc.), each with a different problem.
2. Evaluate the hoses and point out the problems with the hoses. Determine what could have caused the problem and the best possible way to fix the problem.
3. Write a report detailing the possible problems with water hoses, how to repair common water hose problems and ways to preserve hoses and keep them in mint condition.
