

Welding Project Ideas

Directions:

1. Research oxy-fuel cutting equipment and electric-arc welding equipment.
2. Research wind chimes' construction and the materials needed for construction.
3. Prepare a paper summarizing your findings. Be sure to include a metal materials list, such as pieces of shaped metal attached to chains connecting a metal base, as well as a costs estimate spreadsheet.
4. Prepare wind chimes using oxy-fuel cutting equipment and electric-arc welding equipment. When building the wind chimes, you should operate oxy-fuel cutting equipment, as well as electric-arc welding equipment.
